

FUGAWI GPS MAPPING SOFTWARE

INTRODUCING MOVING MAP SOFTWARE

Use **ANY** Map for
ANY Activity With
ANY GPS Receiver!!

The FUGAWI software package empowers you to utilize the Global Positioning System (GPS) to navigate adventures on land or sea. This is a P.C. based software program for GPS receivers. FUGAWI allows you to pinpoint your position on any map, offering feature packed navigation for upload and download of waypoints, routes and tracks for most GPS receiver models.

Relied upon by professionals and sportsmen alike, navigation with FUGAWI and GPS has become the affordable tool of choice. FUGAWI delivers greater utility for GPS navigation adding features, access and control.

FUGAWI is the perfect tool to analyze, plan, plot and print your route. The program can be used to download routes into your GPS unit, print out a custom map; or view your position in real-time mode with a lap-top connected to your GPS on a boat or in a car! With the functionality that made it famous, the program allows you to scan and use maps or charts from any region in the world. However, with the greater availability and low cost of digital nautical charts and land maps, CD's are a more convenient option. The program works with Softchart and Maptech BSB format nautical charts, BSB and USDRG topographical maps and supports both vector and raster maps. New maps and charts are loaded automatically as your route crosses different regions.

FUGAWI is the most versatile navigation system for GPS receivers. It has been used for a wide variety of activities and applications. This powerful program can be used for GIS applications, recreational, educational and professional navigation solutions. The program has been used for everything from the training of U2 pilots, military mapping to a quiet cruise around a lake or a hike through the backwoods!

FUGAWI 3 is offered in two world versions, each retail at \$95US (\$139CAN). The North American market receives an additional CD with USA Streets included and another CD with 80 small-scale nautical planning charts. The Canadian version also includes Canadian Streets at (\$159CAN). The International version contains a CD database of Geographic Places look up or the European Major Road Network.
